AI systems and backend engineer

Final year computer science student who ships. Launched **DebugAI**, a VS Code debugger with **5,800+ downloads** across three registries. Strongest at making expensive systems cheap: a reconciliation engine that replaced per row API calls with a blocked matcher and does **100,000 rows in 4.25 seconds** with zero API calls.

Experience

Founder and sole engineer LAUNCHED — Feb 2026 – now

DebugAI · an AI debugger for VS Code, debugai.io

- Built and shipped every layer of a **five service monorepo**: VS Code extension, Express gateway, FastAPI inference engine, Next.js dashboard, PostgreSQL with pgvector, Redis.
- **512 Marketplace installs, 5,800+ downloads** across three registries, 879 commits, 519 engine tests passing.
- **Context assembly** from a stack trace: traced files forced in, then pgvector retrieval of code the trace never names, inside a token budget. SHA-256 cache, difficulty based routing, and a cross provider fallback that holds the response shape during an outage.
- **Live billing** on production keys: HMAC verified webhooks, idempotency on the provider event id, and a tier guard that enforces an expired trial even when the cron fails.

Summer Training Intern, Generative AI with ML — Jun – Jul 2025

RemarkSkill Education with IIT Hyderabad

- Built a **retrieval augmented QA system** and found that chunk boundaries, not prompt wording, decided answer quality. Recognised at close for technical soundness.

Selected projects

MatchLedger AI · bank reconciliation engine — May 2025 – now

- **Three passes ordered by cost**: a vectorised hash join, a date tolerance pass, then fuzzy narration similarity on the remainder, blocked by amount bucket and date window.
- **100,000 against 98,000 rows in 4.25 seconds**, 95% matched, zero mismatches against ground truth. Unblocked the same job is a 9.8 billion comparison. FastAPI, Celery, Redis, PostgreSQL.

SS Categorise · multimodal classifier — 2024, rebuilt 2026

- Fused an **EfficientNet-B3** embedding with a 500 term TF-IDF vector over OCR text: **96.92%** on a 260 image held-out set across 20 classes. The gain came from a confusion matrix showing a missing input channel, not from more capacity.

Inkline · handwriting to installable font — Aug 2026

- Homography un-warp of a photographed sheet, then a **Moore boundary tracer and Schneider cubic fitter written from scratch** because Potrace is GPL and would attach itself to every font the tool makes. A headless browser test downloads the OTF and parses it back.

Skills

Languages: Python, TypeScript, JavaScript, C, SQL

Backend and ML: FastAPI, Express, Node.js, Celery, Redis, PostgreSQL, pgvector, PyTorch, scikit-learn, OpenCV

Infrastructure: React, Next.js, Docker, AWS EC2, Railway, Vercel, nginx, GitHub Actions, Sentry, OWASP Top 10

Education and recognition

B.Tech, Computer Science Engineering (Data Science) — Aug 2023 – Aug 2027

Swami Vivekananda Institute of Technology, Hyderabad

- **Second place, Techno Udbhav 2025** research paper competition, for OptiXon health sensing eyewear. Smart India Hackathon 2025. IIT Hyderabad certificates in Generative AI with ML and Data Science.
